The Crux

Research design is more important than your model!

Data, where you can find it?

- ▶ Use replication data or data used by previous research
 - ▶ <https://dataverse.harvard.edu/>
- ▶ Find your data through variables.
 - ▶ <https://www.icpsr.umich.edu/web/pages/>
- ▶ Let's find it in GSS and other.
 - ▶ <https://gss.norc.org/>

Starting your first line of code

Like writing a paper, starting your first line of coding is important

- ▶ Having a outline of your code - procedural programming.

Let's do some gardening!

let's $\text{Im}(y \sim x)$!

There is not much difference between R and stata

- ▶ They are just software, choose whatever fits your needs.
- ▶ It's statistics after all.
